Charlie Hou

1788 Trinity Rd.   4391 Frist Center

Canton, MI 48187   Princeton, NJ 08544

734-928-8872   hou.charlie@gmail

Education

Princeton University, Princeton, NJ   *Sept 2015-Present*
Bachelor of Science in Engineering, Statistics
Certificates: Applied Math
Overall GPA: 3.81/4.0
Relevant Coursework: Functional Programming, Algorithms and Data Structures, Introduction to Programming Systems, Real Analysis, Applied Machine Learning, Mathematical Statistics (grad class), Statistical Learning Theory (grad class), Large Scale Optimization for Data Science (grad class), Deep Learning Foundations (grad class), High Dimensional Probability (grad class)

Experience

Goldman Sachs, New York City, New York, *Strat Intern*   *May 2018-Aug 2018*
- Improved mathematical rigor of simulations on stress-testing model, implemented changes in code using Slang (GS programming language). These changes impacted projections made by $250 million
- Designed and implemented a model monitoring system in Slang and SQL that gives periodic summaries and alerts the firm to unexpected behaviors on an ongoing basis based on current data
- Wrote MapReduce jobs to process and extract market manipulation data from Hadoop file system

BNY Mellon, Jersey City, New Jersey, *Software Engineering Intern*   *Jun 2017-Aug 2017*
- Analyzed statistical relationships between work variables and code output using SQL and Python
- Implemented a 3D data visualization app on HoloLens in C# which was demoed to leadership

Personal Projects
Wall Street Bets
- Used a multinomial naïve bayes model on Reddit posts, using Python and scikit-learn to trade stocks
- Achieved greater than 50% accuracy on direction of prices during testing

Advised Projects
Exploring the effect of depth on optimization in deep learning (Advised by Prof. Yuxin Chen)
- Implemented neural networks in TensorFlow and Pytorch and observed effects of layers on training rate
- Found that increasing number of layers reduced penalty term in loss

Analysis of peeling algorithms for vertex order recovery in random graphs (Advised by Prof. Miklos Racz)
- Characterized the dynamic process by which a random graph binning evolves
- Re-implemented a library method for preferential attachment process in Python to adhere to currently studied versions of preferential attachment.   Used method to run simulations of large graphs efficiently

School Activities/Misc.
Tiger Chef Champion (Winner 2018, Participant 2016/2017) (a school-wide cooking competition)
Princeton Club Tennis, *A-team member*   *Sept 2015-Present*

Technical Skills
Proficient: Python, R, SQL, Java
Familiar/Experience with: C, MATLAB, Javascript, Ocaml, Hadoop, MapReduce, C#
Software packages: Tensorflow, Pytorch, scikit-learn, PANDAS, scipy, jupyter, glmnet, igraph
